

Frontend Test Matrix Summary

Area	Critical coverage	Status
Auth	sign up, sign in, Google auth, required field validation	Done
Landing	create room, store first message, route to chat	Done
Chat	load history, stream assistant reply, save user message	Done
NavBar	open history, navigate to chat, delete history, account link	Done
Account	load profile, save profile, logout	Done
Route guard	redirect unauthenticated access to <code>/auth</code>	Done

Scope

This matrix is intentionally focused on production paths that affect real users. It does not try to cover every visual state or CSS variation.

Test Strategy

- Unit-level component tests for form behavior and route guards
- Mocked integration-style tests for service calls and streaming chat flow
- Deterministic router/service mocks instead of live backend calls

Priority Gaps

- PageChat metadata rendering can be expanded later if UI logic changes
- MessageList link handling can get its own dedicated tests if those interactions grow
- Library browsing flows can be added next if frontend coverage needs to expand
